Water Pipe Replacement Project Starting April 2nd

Charlotte Water (CLTWater) is starting construction to replace existing 2-inch galvanized steel pipes (GSP) water mains with new 6 and 8-inch water mains within the areas listed below (Phase 1):

- South Tryon Street (Griffith Street to Herman Avenue)
- May Street (Herman Avenue to Foster Avenue)
- Foster Avenue (May Street to Bank Street)
- Bank Street at Griffith Street

Construction is estimated to start around April 2nd and last three-four months for Phase 1.

Please visit the project website by going to www.charlottewater.org and select 'Projects' to view updates.

During Construction

Construction can be loud, dirty and inconvenient. Crews will be using heavy equipment and storing materials on-site. The water main will be installed within the sidewalk limits and the curb and gutter is planned to remain in place. Please be aware of your surroundings near the construction site and report any safety concerns to the project inspector as soon as possible.

Property Access (Driveway)

Construction activities will take place within the street right-of-way. However, driveway and sidewalk access may be limited at times. If you need assistance, please talk to contractor or call project inspector.

Lane Closures and Street Parking

The contractor will be working from 9 AM to 4 PM with a daily lane closure on the outbound outer lane of South Tryon Street.

Sidewalk Closures

The contractor will close the sidewalk adjacent to the outbound lane of South Tryon Street in the vicinity of the work area. Pedestrians will be detoured using the sidewalk on the inbound side of South Tryon using Griffith Street to Clanton Road.

Planned Water Outages

Staff will notify affected customers of planned water outages 72-hours in advance. Any unplanned water outages are considered emergencies and will be repaired as soon as possible.

Discolored Water is Possible

Construction may cause temporary cloudy, discolored water or lower than usual pressure. If you experience some discoloration in your water:

1. Run the cold water from your outside spigot or tub for 15 minutes.
2. When the water runs clear, run cold water through any taps where discolored water is present.
3. If not clear, call 311 to report issues.

Flowing Hydrants

Residents may see water flowing from hydrants as part of construction activities.

Restoration

Crews will complete a temporary restoration of anything disturbed by construction. Final restoration may occur after completing a phase or entire project. Our project inspector can assist with restoration questions. Properties that lose grass during construction will be reseeded and covered with straw.
